

ADVISORY

Effective February 1, 2011, new customers making a complete submission for primary service will be connected in a SINGLE RADIAL or DUAL SUPPLY configuration. DUAL RADIAL CONFIGURATIONS will no longer be constructed.

BC Hydro will discontinue the expansion of the DUAL RADIAL SYSTEM and NETWORK SYSTEMS, and will convert to an automated OPEN LOOP SYSTEM. Connection requirements for primary customers are included in the “Requirements for Customer-Owned Primary Services Supplied at 4 kV to 35 kV Primary Guide Revision June 2010”. This document can be accessed on BC Hydro’s website at: http://www.bchydro.com/youraccount/content/electrical_connections.jsp

For further information on BC Hydro requirements, please contact the local BC Hydro design office or call 1 877 520 1355 during normal business hours, 8:00 am to 4:00 pm, Monday to Friday.

By February 1, 2011, all new applications for primary service will be required to meet the new connection requirements described above. Effective immediately, BC Hydro will be advising customers upon their application for service, of the new design requirements. Customers will be encouraged to meet the new requirements before this date as this will result in lower conversion costs for customers.

For any questions or clarifications, please email lmsc.communityrelation@bchydro.com
